

Updating Quick Button and Super Codes for the new Fluoride Codes

Charting Clients - Don't forget to update your Quick Buttons and Super Codes to reflect the new Fluoride codes

To update the Odontograms Quick Button – Left click on the Hygiene/Preventative Button

Then Click on Add Procedure

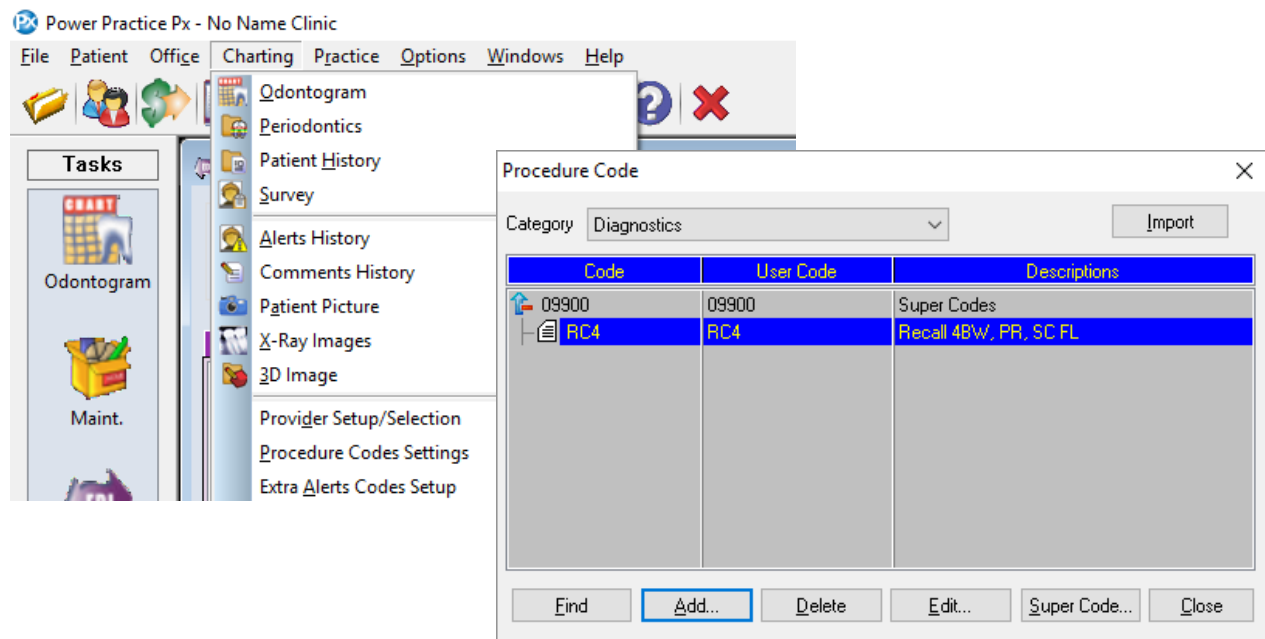

On the left hand side find the old Flouride codes you used and then click Remove – this will take them out of the pop-up codes

Next use search to find the new codes, select each one you will need and click Add to add them to the pop-up

You will also want to update your Supercodes that use Flouride.

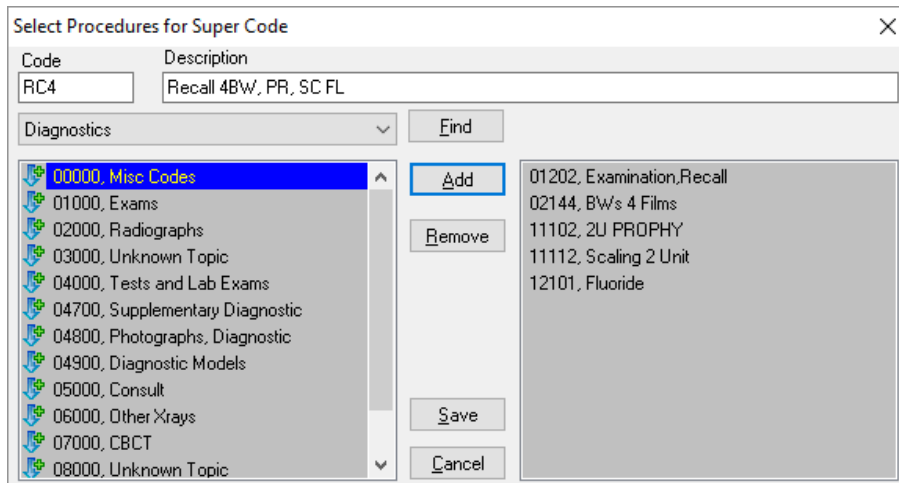

In Power Practice click on the Word Charting and go down to Procedure Code Settings

Locate the 09900 Super Codes Heading in the Diagnostic Category

Edit each Super Code that bills fluoride

Remove the Old Flouride Code and add in the new code you want attached to the Super Code

*You may want to create new Supercodes to accommodate the Pedo recalls that may be Gel/Foam or Rinse.
